Messengers of Time and Space - 7:00 PM

Explore the dynamic cosmos and witness how data shapes the way we understand the Universe. Light is not the only indicator of exciting astronomical events; information can reach us through other messengers like cosmic rays, elusive particles called neutrinos, and even gravitational waves rippling through the space.

Under Our Sky - 8:00 PM

Join us for a LIVE tour of tonight's night sky, including constellations, planets, and nebulas you can spot right here in Takoma Park. Then, explore beyond what our eyes can see by discovering the power of electromagnetic radiation, enormous telescopes, and the vast Universe beyond our Solar System.

Space is limited. Registration is required.
Register today.
